*NYS SIU Pretreatment Permits \$300.00. Professional services assistance in connection with the permit review shall be charged to the applicant.

Abnormal Sewage Formula – Applicable to all Sewer Districts:

Any real property connected to the sanitary sewage system sending wastes to the Town of Farmington Wastewater Treatment Plant which contain allowable pollutants that exceed the maximum values for normal sewage established in Section 125-5 of the Town Code shall be surcharged. This surcharge reimburses the Town for additional costs associated with the treatment of abnormal sewage.

The formula for the surcharge shall be as follows:

$$\text{Adjusted Surcharge Factor} = \text{Gross Surcharge Factor} * \text{Budget Factor}$$

Where:

- Adjusted Surcharge Factor is the number of sewer units a property owner will be billed for abnormal sewage. This number shall be rounded to the nearest integer.
- Gross Surcharge Factor is the maximum calculated proportion of actual strength of waste relative to normal sewage strength (as defined in Town Code Section 125) of allowable pollutants. This factor represents the Gross Sewer Units and shall be rounded to the nearest integer.
 - Allowable pollutants shall be quantified by the parameters of:
 - COD (Chemical Oxygen Demand)
 - BOD₅ (5-day Biological Oxygen Demand)
 - TSS (Total Suspended Solids)
 - NH₃ as N (Ammonia as Nitrogen)
 - TKN (Total Kjeldahl Nitrogen)
 - TP (Total Phosphorous)
- Budget Factor is the percentage of the Town Sewer Budget associated with the treatment of waste at the Town’s wastewater treatment plant. This factor is subject to change based on the annual Town Sewer Budget. This has been recently calculated as 23% of the Town Sewer Budget (2021 Town Sewer Budget).

Abnormal Sewage Formula:

$$\text{Sewer Units for Abnormal Sewage} = \text{Gross Sewer Units} * \text{Budget Factor}$$

Example:

A facility discharging sanitary sewage to the Town’s collection system has been identified as a potential Significant Industrial User (SIU). After several rounds of analytical sampling performed by the facility, the average analytical results are shown in Column #3.

Column #1	Column #2	Column #3	Column #4
Parameter	Normal Sewage (mg/L)	Analytical Results (mg/L)	Gross Surcharge Factor
COD (Chemical Oxygen Demand)	350	20,000	57
BOD ₅ (5-day Biological Oxygen Demand)	250	16,000	64
TSS (Total Suspended Solids)	300	6,000	20
NH ₃ as N (Ammonia as Nitrogen)	30	25	1
TKN (Total Kjeldahl Nitrogen)	50	50	1
TP (Total Phosphorous)	15	5	0

Shown in **bold** above, the maximum Gross Surcharge Factor derived from the list of allowable pollutants is for 5-day Biological Oxygen Demand. The Gross Surcharge Factor is **64 Sewer Units**.

Using this Gross Surcharge Factor and the current Budget Factor, the Adjusted Surcharge Factor can be calculated to determine the total number of Sewer Units the property will be charged:

Budget Factor = 23% (derived from the 2021 Town Sewer Budget)

*Adjusted Surcharge Factor = Gross Surcharge Factor * Budget Factor = 64 * 23% = 14.72*

Adjusted Surcharge Factor = 15 (rounded to nearest integer)

For this account, the property owner will be billed 15 sewer units per billing cycle.
