Re: Photo Simulations
Delaware Solar Photovoltaic Project
466 Yellow Mills Road
Farmington, NY

Dear Honorable Chairman and Members of the Planning Board:

Delaware River Solar seeks approval from the Town of Farmington, NY to construct a solar (photovoltaic) project at 466 Yellow Mills Road. Saratoga Associates, Landscape Architects, Architects, Engineers, and Planners, P.C. was retained to provide photo simulations of the proposed project depicting how the project will appear from nearby vantage points.

Saratoga Associates previously submitted to the Board photo simulations illustrating the visual character of the proposed project as viewed from several vantage points along Yellow Mills and Fox Roads. Since these photo simulations were last provided to the Board the project has undergone minor design modifications including relocation of several solar arrays, adjustment in the location of the fence line, change in the planting plan to include two staggered rows of screening evergreen trees, and a more detailed design of the utility interconnect along Fox Road. All photo simulations previously submitted to the Board have been updated to reflect these project modifications. An additional photo simulation has also been prepared to illustrate the character of the site driveway/utility interconnect as viewed from the intersection of Yellow Mills and Fox Road. This additional photo simulation is provided in the attached submission as Figures 3C and 3D.

The methodology used to prepare the updated photo simulations is the same as is detailed in our January 8, 2019 letter to the Board.
