

Nov 8, 2018

Mr. Hemminger,
attending the meeting last night I'm more
used than ever that this solar project is
the best interest of the people of the community
whole. Every citizen who spoke last night had done
research and spoke with a clear understanding of
his massive solar project would do to our area,
affect our lives... and I'm old enough to have seen
sequences of bad development in other places
and here in this area since the early 70's and I care
for the people and the place I've called home for
years. The decisions you make and others make
reverberate for decades... long after we're gone.
I'm a land owner and a citizen of Farmington. I agree
with the phrase "Let's keep the FARM in Farmington"
and I will pass it to my children + grandchildren and my neighbors.
In my opinion, I came to this meeting to be informed
and I'm a shy person, but I will come to the next meeting to
speak up. For one thing - "The Postal address" was a red
flag. It was the rest of the sugar coated presentation
company. They are big business and are only in
their benefit irregardless of what it does to us.
I'm a citizen who came seemed to be against this project.
I'm a citizen in favor of it... and we all showed up.

to the matter.
in defense of land and wildlife who obviously
eat for themselves... that needs to be considered
live here because we want to be in this natural
environment, and it needs to be preserved for
generations or the end result will be a Farmington
different from what we ever thought it would
be. I believe the Solar Project approval would just
be a Pandora's Box for further such projects.
It crisscrosses this area and migratory birds
head - How will they deal with this? I have
that large solar "farms" are kill zones for
ring over them. Is that so? - because if
it would be whatever solar panels do to
energy causes birds to die. I'm old and
we a computer - you do. Please check on that.
Thank you for taking the time to read my letter.

Sincerely,

Marilyn Fair
