MODEL RESTRAINTS

MOP NUMBER 04

(REVISED ???)

Table of Contents

1. Narrative Of Mop	1
2. Purpose	1
3. Policy	1
4. Responsibility	1

NARRATIVE OF MOP

All models will be restrained and face in an Easterly direction before starting.

PURPOSE

When models are started, whether internal combustion or electric engines, there is a potential risk that the model if not restrained will move forward and as a result, injury to the member starting the model could occur.

Engine: Includes internal combustion, turbine and electric powered engine.

Model Restraint: Any device which will prevent the model from moving forward when the engine is running and the propeller is rotating.

POLICY

Prior to starting, all models will be in the pit area.

All models will be restrained from moving forward when the engine is started and the propeller rotates.

The front of the model will face in an easterly direction towards the safety fence and away from spectators.

Once started, it is recommended that all adjustments to the motor be made from behind the propeller.

Once the model is started it should not be left unattended or unrestrained in the pit area.

RESPONSIBILITY

It is the responsibility of all members to ensure that these procedures are adhered to.
