

## Wolfe Road Sewer Relocation Project

### ► Overview

The Santa Clara Valley Transportation Authority (VTA), in cooperation with the City of Cupertino and the California Department of Transportation (Caltrans), propose to modify the Wolfe Road Interchange on Interstate 280 (I-280) in the City of Cupertino. The future VTA project will replace the existing freeway overcrossing at North Wolfe Road in Cupertino and the new overcrossing structures will be located in the current location of an existing Cupertino Sanitary District sewer mainline.

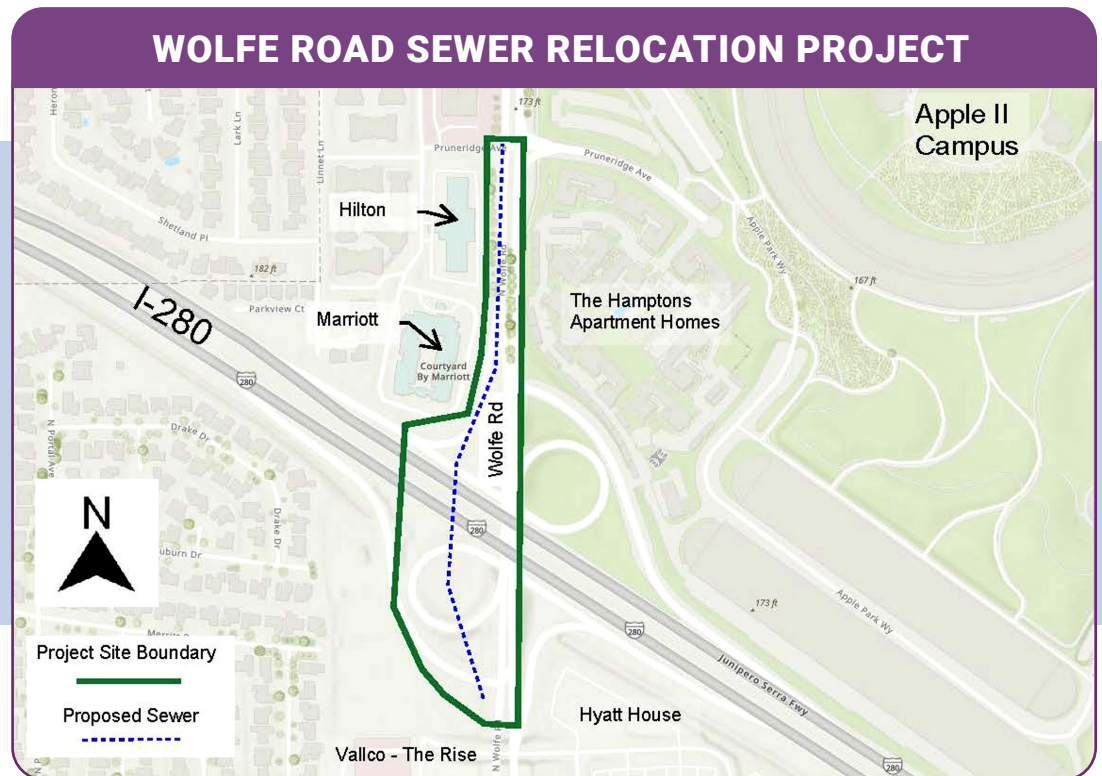

### ► Objective

Cupertino Sanitary District (District) is required to relocate its existing 15-inch sanitary sewer within the Caltrans right of way at Wolfe Road in Cupertino due to the planned I-280 interchange project.

### ► Project Features

The proposed improvements include, but are not limited to, the following:

- The installation of approximately 2,000 linear feet of 15-inch sewer mains, approximately 300 linear feet of 8-inch sewer mains, 6 manholes, and the abandonment of approximately 1,700 linear feet of existing 15-inch sewer mains and 4 manholes.
- A 36-inch diameter steel casing pipe will be installed via three (3) tunneling drives under the I-280 Caltrans right of way. A 15-inch diameter carrier pipe will be installed within the 36-inch steel casing pipe.
- A new 15-inch pipe will then be installed using open cut construction in a deep (20 Foot) trench located within the median of Wolfe Road just north of I-280. The pipe will be connected to an existing 27-inch diameter sewer just past the intersection of Wolfe Road and Pruneridge.

### PROJECT SCHEDULE

Construction:  
March 2023 – December 2023

### FUNDING

Funding for this project has been provided by VTA and the City of Cupertino through a utility relocation agreement between VTA & the District.
