### **GMU BOTTLED WATER ADVISORY UPDATE**

Greenfield Municipal Utilities received the results of the water samples taken to the lab yesterday afternoon earlier this morning. The results received show that all of the samples were less than the reporting limit (0.2ug/L) for microcystin.

The water currently in our system is free from toxins and safe for pet/livestock consumption but may still contain high levels of turbidity. Please contact your veterinarian with any questions or concerns regarding using water from the GMU system for your pets/livestock.

At this point, GMU has begun draining our ground storage facility and will follow that with flushing our entire water system as per DNR recommendation. The Bottled Water Advisory is still in effect until our system has been flushed and we have confirmed that our turbidity readings are below DNR allowable limits.

Future news releases will be forthcoming when the Bottled Water Advisory has been lifted. At this time we do not have an exact time on that process but estimate to have the Advisory lifted before the weekend barring any unexpected events.

Greenfield Municipal Utilities would like to thank our customers for being patient and cooperative during this process. We also express our gratitude to Hy-Vee, Casey's & Fareway for their gracious donations of bottled water for our community and also the citizens who volunteered their time to help hand out bottled water.

As always, if you have any questions, please call our office at 641-743-2741 during normal working hours of 7:30 AM – 4:30 PM.
