## Executive Summary

## Executive Summary

The following executive summary highlights the initial findings regarding grocery store and related retail plaza opportunities in the Town of Silt, Colorado. The findings are a result of the final recommendation of a subject site for optimal retail demand.

The following Retail Market Analysis Report clearly illustrates that there is a significant amount of retail leakage occurring from within the Silt Primary Trade Area (PTA) to outside towns. It is THK Associate's opinion, based on the following findings, that a grocery anchored retail center can re-capture a large portion of the retail expenditure losses currently occurring today. A grocery anchored retail center will attract other tenants such as pharmacy, personal services, banking, possible medical and dental offices and related uses that tend to locate near oneanother. Without a grocery anchored retail center, the Town of Silt will likely continue to suffer from significant retail leakage in the coming years, continuing to lose uncaptured tax revenues for the Town of Silt. Highlights of the report include the following:

## A. Three-County Economic Base Analysis

- The Town of Silt is located within the greater Three-County area of Garfield, Pitkin and Eagle County.
- The Three-County region currently has a population base of 130,856 people living in 49,619 households, of which approximately 107,717 people are employed (pg. 41).
- The Three-County region has been growingly historically since 1980 by 2,070 jobs and this has fueled annual population growth of 2,420 people in 890 households. In the last five years annual employment growth has accelerated to an average of over 1,797 new jobs per year (pg. 15 \& 32).
- This Three-County region is projected annually to grow by 2,470 new jobs per year over the next decade. This will stimulate annual population growth of 3,020 people in 913 households (pg. 41)
- Since 1980, the Three-County region has averaged annually the construction of 986 residential units, including 714 single-family units and 272 multi-family units (pg. 34-37).

## B. Garfield County Economic Base Analysis

- Garfield County makes up the immediate environs of Silt.
- Garfield County currently has a population base of 58,409 people, living in 21,092 households, and 39,204 employed people (pg. 42).
- Garfield County has been growing historically since 1980 by 771 jobs and this has fueled annual population growth of 1,030 people in 361 households. In the last five years, Garfield Counties' employment growth has accelerated to 565 average annual new jobs per year (pg. 16 \& 32).
- Garfield County is projected annually to grow by 1290 new jobs per year over the next decade. This will stimulate annual population growth of 1,930 people in 665 households (pg. 42).
- Since 1980, Garfield County has averaged annually the construction of 338 residential units, including 275 single-family units and 63 multi-family units (pg. 34-37).

## C. Retail Market Analysis

- In 2014 retail sales tax revenues in Garfield County were estimated to be $\$ 8.55$ million dollars up from $\$ 6.42$ in 2013. (pg. 48).
- Prior to the recession retail sales taxes in Garfield County peaked at $\$ 15.38$ million dollars in 2008 (pg. 48).
- Sales tax revenues for Silt for the 2014 were $\$ 592,916$ down from \$628,066 in 2013 (pg. 48).
- Retail lease rates in the Town of Silt range from $\$ 10-\$ 12$ per square foot for older product and $\$ 12-\$ 14$ for newer product, as compared to $\$ 12-\$ 14$ in downtown Glenwood Springs, $\$ 14-\$ 16$ in Glenwood Meadows, $\$ 12-\$ 14$ around the City Market Shopping Center in New Castle, $\$ 10-\$ 12$ for downtown Rifle and $\$ 14-\$ 17$ around WalMart in Rifle (pg. 45).
- Retail leakage in the Town of Silt is evidenced by the fact that there is only 17.9 square feet of retail space in Silt per person - compared to 133.3 square feet per person in Glenwood Springs, 20.8 square feet per person in New Castle, 44.5 square feet per person in Rifle, 129.2 square feet per person in Parachute and 37.4 square feet per person in De Beque (pg. 50).
- Most major grocery chains are represented in the mountain communities with the exception of Sunflower Market, Sprouts and Whole Foods (pg. 53).
- The primary trade area for retail establishments in the Town of Silt range from approximately five to seven miles and approaches New Castle and Rifle (pg. 55).
- Within the primary trade area there are currently 6,610 persons in 2,334 households and the primary trade area has grown by 163 persons and 55 households annually since 2000 (pg. 57).
- Over the next decade the Silt PTA is projected to grow by 150 persons and 55 households annually on average (pg. 57).
- The median annual household income in the primary trade area is $\$ 57,647$ of which $\$ 23,191$ is available for retail expenditures (pg. 59).
- A "local chain" supermarket is typically 37,895 square feet in size and achieves \$501 per square foot in sales (pg. 62).
- In 2016 it is estimated that there is a demand for approximately 274,460 square feet of retail space in the Silt PTA and this will grow to 298,557 square feet in 2020 and by 2025 there is projected to be a demand for 329,728 square feet of retail space; however, only a portion of this space is supportable due to minimum threshold store sizes (pg. 68).
- There is an estimated 53,700 square feet of retail oriented space in the Silt Primary Trade Area today within approximately 21 establishments (pg. 69).
- Depending on the store type, a new retail neighborhood shopping center in Silt could be expected to capture anywhere from 5\% of market share for store types such as clothing and furniture to $70 \%$ for grocery type facilities where there is minimal competition (pg. 79).
- A new retail neighborhood center in Silt could support approximately 49,278 square feet today, 54,971 square feet in 2020 and 62,335 square feet by 2025. (pg. 79).
- Of the six locations THK Associates, Inc. was requested to examine for a grocery anchored center, only one (Highway 6 between $10^{\text {th }}$ and $16^{\text {th }}$ is suitable for a grocery center in terms of size, access, visibility, and proximity to the Silt population base (pg. 82-85).
- This site area totals 8.9 -acres (sites) and is made up of four separate parcels all of which are owned by the Town of Silt (pg. 82-85).
- If the entire 8.9-acres is utilized THK would recommend 58,200 square feet in a neighborhood center with two "pad" sites that could accommodate an additional 7,500 square feet bringing the total square footage to 65,700 square feet (pg. 85).
- Stores recommended for the 65,700 square foot retail development include a 25,000 square foot grocer, up to a 3,000 square foot pharmacy and related products, a 4,500 square foot auto parts store, two restaurants totaling 8,000 square feet, and several miscellaneous retail and personal care products/services stores. Additionally, we have recommended two pads that would include a 5,000 square foot bank and a 2,500 square foot fast food restaurant (pg. 85).

## I. INTRODUCTION

## I. Introduction

The purpose of this market analysis has been to determine the market potentials for grocer and retail related development within the Town of Silt, Colorado. Additionally, we have examined the fiscal impact analysis to the Town that would be generated by a new grocer anchored retail development. At present, the Town is considering six individual sites for a grocer anchored retail development. The sites under consideration for development are located in various sections within the town limits of Silt.

The study has examined potentials for retail uses, focusing on the potential market demand for a grocery anchored strip center. In order to position the proposed uses at the sites in Silt, THK has undertaken the following research:

- Prepared an economic base analysis of the Three-County market area of Garfield, Pitkin, and Eagle County.
- Prepared an economic base analysis of Garfield County.
- Profiled the Three-County area and Garfield County by population, household, employment, major employers, income and age characteristics, single-family and multifamily housing permit data and other relevant housing statistics.
- Interviewed key persons related to the economic development of and researched recent publications related to the Town of Silt and subject sites environs.
- Determined a primary trade area (PTA) from which a majority of the retail demand at the Town of Silt is projected to derive from.
- Examined historical sales tax revenues and other retail related characteristics for Garfield County and the Town of Silt.
- Examined national and regional supermarket store characteristics and trends
- Examined retail expenditures by store type for households in the Silt PTA to determine the current amount of supportable square footage and required household support/demand by store type.
- Inventoried retail/commercial locations and grocer related space by square footage along the I-70 corridor including the Town of Glenwood Springs, New Castle, Rifle, Parachute/Battlement Mesa and the Town of De Beque.
- Determined total retail square footage in the Town of Silt by specific store.
- Profiled potential grocery stores for the Town of Silt by location, average square footage, and contact information.
- Determined total supportable square feet of demand and net required square feet of demand for each retail store type in the Silt PTA and at the Silt subject sites over the 2016 to 2025 time period.
- Determined absorption levels for retail/commercial and grocery store space in the Town of Silt, and recommended store types related to a grocery anchored retail development.
- Inspected six potential grocer anchored retail development sites within the Town of Silt and recommended development on the 8.9-acre site to the north of I-70.

# II. SITE DESCRIPTION 

## Site Description

## II. Site Description

The Town of Silt is located on Interstate 70 in Garfield County approximately 60 miles east of Grand Junction and 176 miles west of Denver. Nearby towns include Rifle (eight miles to the west), New Castle (seven miles to the east), and Glenwood Springs ( 20 miles to the east). The Garfield County Regional Airport is located between the Towns of Silt and Rifle, roughly four miles west of downtown Silt on Interstate 70.

At present, the Town has a population of 3,007 residents living in 1,013 households, and within an approximate five to seven minute drive of the Town there are approximately 6,610 persons living in 2,334 households. Between 2000 and 2015, the percentage rate of growth for Silt PTA population was $3.1 \%$ annually on average, much greater than Garfield County which grew at approximately $1.9 \%$ over the same time period.

The Town of Silt is considering six sites for a grocery anchored retail/commercial development. The six parcels under consideration are located in various sections of the Town, and some of the parcels are currently owned by the Town while other parcels are owned by private land owners.

Site 1 - This 0.44 acre property is located on the eastern area of Silt. While the site has good visibility from I-70, it has inferior access compared to all of the other sites. The area is more industrial than some of the other sites. The site is realistically too small to accommodate retail and grocery uses unless it is combined with adjoining parcels. It is THK's opinion that this is least desirable for additional retail uses in Silt. This site is owned by a private party.

Site 2 - This 0.61 acre property is located on Highway 6, east of downtown Silt. The site has good access and visibility to Town residents, but limited visibility from I-70. Access and visibility are inferior to sites \#4 and \#6. The area is more business and industrial. The site is too small to accommodate a reasonable sized grocer and there is no area for expansion or other tenants. It is THK's opinion that this is second least desirable for additional retail uses in Silt. This site is owned by a private party.

Site 3 - This 6.04 acre property is located on Highway 6, east of site \#4. The site has good access and visibility to Town residents and good visibility from I-70. Access and visibility are inferior to sites \#4 and \#6. The site is large enough to accommodate a grocer tenant and allow for other uses and expansion. It is THK's opinion that this is $3^{\text {rd }}$ most desirable for additional retail uses in Silt. This site is owned by a private party.

Site 4 - This property is an assemblage of four sites totaling 8.91 acres. All of the sites are owned by Silt. The property has good access and visibility from I-70 and is near downtown. The site has some floodplain and wetlands however these items are currently in the process of being corrected. With 8.91 acres this property offers the opportunity to accommodate a grocer, allow for expansion and attract other tenants. Costs of addressing the floodplain and wetlands, this is by far the best opportunity for new retail in Silt. The area already has two convenience stores and the amount of frontage on Highway 6/Main Street will allow for excellent ingress and egress.

Site 5 - This property is three parcel owned by the Silt Land Group. The total acreage is .4820 . The site is adjacent to the Dollar General Store. While this is a good location
and could anchor Main Street, the site is not able to accommodate a grocer tenant and allow for expansion. Access and visibility are inferior to site \#4 and \#6. This is the $4^{\text {th }}$ most desirable site of the six sites.

Site 6 - This 2.407 acre property is located on the north side of Silt, across I-70. It is adjacent to the Holiday Inn which is located on land owned by Silt. The site has good visibility and access from I-70. However the site is across the highway from downtown Silt and a grocer tenant could create a competitive area to downtown. Also with only 2.407 acres the opportunities for expansion and other tenants is limited. This site is best suited for a highway oriented use such as fast food or convenience related. It is THK's opinion that this is second best site for additional retail uses in Silt. This site is owned by a private party however Silt is negotiating for the purchase of the property.

The ranking of the sites best suited for a grocery anchored retail development are:

## Selection 1: Site Four

Selection 2: Site Six
Selection 3: Site Three
Selection 4: Site Five
Selection 5: Site Two
Selection 6: Site One
THK believes that given the strong demand for a grocer related development, the best suited site to support a grocer anchored retail development, is the 8.91-acre site located on Highway 6 between $10^{\text {th }}$ and 16th (to the north east of the Silt exit) is most adequately suited for a grocer anchored development due to its' excellent visibility to I-70 and it's prime location with proximity to the Town's population. This site is comprised of four individual parcels, all owned by the Town of Silt. Generally, the site is level with some low-lying areas that would require fill in order to alleviate floodplain and wetlands issues. This work is in the preliminary stages.

The six properties are shown in detail on the table on the following page, and maps, aerials, and photos of the sites under consideration are shown on the following pages.

## III. Economic Base Analysis

## A. Historical Employment Growth

Employment trends are prime indicators of the economic growth of a market area. Increases in employment generate growth for most sectors of the local economy and dictate the rate at which it will expand economically. This section looks at the Town of Silts surrounding market area's various employment figures by industry and projects that growth over the next decade. Table III-1 shows historical employment growth since 1980 in the Three-County market area, defined as Garfield, Eagle and Pitkin counties. Total employment has grown from 35,276 jobs in 1980 to 107,717 jobs in 2015 - an annual increase of 2,070 jobs. Since 2011, the Three-County market area has added 1,797 new jobs on an annual basis, and since 2013 this figure has been 1,915 net new jobs annually on average.

Table III-2 shows historical employment growth for Garfield County. Since 1980, Garfield County has added an annual average of 771 jobs. More recently, since 2011, the Garfield County submarket has added an annual average of 565 jobs, for a $1.5 \%$ average annual growth rate. Since 2011 employment levels have been positive for Garfield County, with the exception of 2015 with saw negative growth. In 2008, Garfield County had a total employment base of 41,398 workers. In 2009 and 2010 the county lost 4,992 employees in total. This trend was short lived, and in 2011 employment grew by 538 employees; since 2013 Garfield County area has added 570 jobs per year. Employment Graphs for the Three-County and Garfield County market areas follow Table III-2.

First adopted in 1997, the Standard Industrial Classification (SIC) index was replaced in 2001 by the North American Industry Classification System (NAICS). The new system allows the government an improved method of tracking economic statistics by focusing on emerging economic activities which can better reflect the changing economy.

Since the institution of NAICS system in 2001, the Three-County Market area has experienced growth in almost every employment sector, as shown in Table III-3. Over the last three years only the Farm and Information industries have seen declines in employment. Employment by industry is tracked for the Three-County and Garfield County submarket in Table III-3 and III-4, respectively. The greatest number of private sector jobs in the Three-County market are found in the Construction industry ( 9,397 jobs), Retail Trade ( 9,335 jobs), Real Estate and Rental and Leasing (10,889 jobs), and Accommodation and Food Services (15,546 jobs). Together, these four sectors account for 45,167 jobs in the Three-County MSA in 2015, or $41.9 \%$ of total farm and non-farm employment. Table III-3 shows that in the past three years, these industries have added an annual average of 471 jobs annually $-24.6 \%$ of the Three-County growth over this aforementioned period of time. These figures are graphed following Table III-4.

In Garfield County, the greatest number of private sector jobs are found in the Mining industry ( 3,149 jobs), Construction ( 4,649 jobs), Retail Trade ( 3,609 jobs) and Accommodation and Food Services (3,118), accounting for 14,525 jobs in Garfield County in 2015, or 37.1\% of total farm and non-farm employment. In the past three years, these industries have added an annual average of 275 jobs, or approximately $48.3 \%$ of total job growth over this aforementioned period of time. The growth and size of each industry follows Table III-4.

| Year | Total Employment | Annual Change |  |
| :---: | :---: | :---: | :---: |
|  |  | Numerical | Percent |
| 1980 | 35,276 | - | - |
| 1981 | 39,201 | 3,925 | 11.1\% |
| 1982 | 42,359 | 3,158 | 8.1\% |
| 1983 | 41,491 | -868 | -2.0\% |
| 1984 | 42,891 | 1,400 | 3.4\% |
| 1985 | 43,681 | 790 | 1.8\% |
| 1986 | 44,449 | 768 | 1.8\% |
| 1987 | 44,734 | 285 | 0.6\% |
| 1988 | 48,743 | 4,009 | 9.0\% |
| 1989 | 52,327 | 3,584 | 7.4\% |
| 1990 | 55,424 | 3,097 | 5.9\% |
| 1991 | 55,688 | 264 | 0.5\% |
| 1992 | 56,994 | 1,306 | 2.3\% |
| 1993 | 61,974 | 4,980 | 8.7\% |
| 1994 | 66,936 | 4,962 | 8.0\% |
| 1995 | 70,301 | 3,365 | 5.0\% |
| 1996 | 73,954 | 3,653 | 5.2\% |
| 1997 | 78,973 | 5,019 | 6.8\% |

ECONOMIC BASE ANALYSIS

Garfield County Annual Employment Growth by Industry, 2015

## B. Projected Employment Growth and Major Employers

As shown in Table III-5, the Three-County market area is projected to add, on average, approximately 2,469 new jobs per year over the 2016 to 2025 time period. The sectors with the highest projected growth by number of jobs are projected to be the Mining industry ( 496 jobs per year), Administrative and Waste Services (281 jobs per year), and Accommodation and Food Services (265 jobs per year).

In Table III-6, THK Associates has projected job growth for the Garfield County submarket area, which is expected to add approximately 1,287 jobs annually on average from 2016 to 2025. Industry sectors that are expected to experience the greatest growth by number of jobs over the next ten years are the Mining industry ( 437 jobs per year), Construction ( 100 jobs per year), and Government and Government Enterprises (115 jobs per year). This illustrates that Garfield County area is less reliant on the Accommodation and Food Services industries than the Three-County and more reliant on the Government industry. Historical and projected ThreeCounty and Garfield County employment are graphed following Table III-6.

Table III-7 shows the largest employers in Garfield County, which include the Valley View Hospital, Roaring Fork and Garfield County School Districts, Alpine Bank and Colorado Mountain College. The top ten employers account for 5,575 jobs, or $14.22 \%$ of the total Garfield County employment in 2015. Within the surrounding environs of the Town of Silt, there are numerous economic stimulators and bases. Major employers and industries include:

- Educational facilities including Colorado State University in Rifle and Colorado Mountain College in Rifle.
- Health care facilities including Silt Medical Center in Silt, Grand River Health in Rifle and Valley View Hospital in Glenwood Springs.
- Financial services firms including Edward Jones financial offices in New Castle and in Rifle.
- Airports including Glenwood Springs Municipal Airport and Garfield County Regional Airport in Antlers.

## C. Income Levels by County

The Three-County market area continues to see rising incomes as shown in Table III-8. Since 2003, only 2009 and 2010 had decreases in per capita income for all three counties, which followed the national trend surrounding impacts caused by the Great Recession.

In 2009 and 2010, Garfield County experienced decreases in per capita personal income, which were $-11.1 \%$ and $-3.5 \%$, respectively. These figures are $-12.8 \%$ and $-2.0 \%$ for Eagle County and $-20.8 \%$ and $-1.7 \%$ for Pitkin County. These figures detail that Garfield County, the county in which the Town of Silt is located fared better by wages that the other two counties. From 1980 to 2013, Garfield County had per capita income growth of $\$ 939$ (4.3\%) annually on average, while Eagle County and Pitkin County grew at $\$ 1,130$ (4.2\%) and $\$ 2,019$ (5.0\%), respectively. Over the last five years, Garfield, Eagle and Pitkin County have grown their per capita incomes by $2.3 \%, 2.5 \%$ and $3.9 \%$ respectively, while the United States overall has experienced an annual average growth rate of $3.3 \%$.

## D. Historical Population and Household Growth Trends

Population and household growth drive the demand for residential and commercial real estate development. As shown in Table III-9, all three counties in the Town of Silt market study area have increased in population and households since 1980. Furthermore, the towns surrounding the Town of Silt, including the Town of Silt have household and population data available from 1990.

Since 1980, the annual average population growth for the Three-County market has been approximately 2,420 people and approximately 890 households, for a people per household ratio of around 2.72 . Since 1990, the annual average population growth for the Garfield County submarket has been approximately 1,030 people and 361 households for a growing people per household ratio of around 2.85, slightly higher than the Three-County people per household ratio. The population growth that has occurred in Garfield County area since 1990 has accounted for approximately $42.6 \%$ of the total Three-County population growth over the same time period. From 2010 to 2015, the annual average population growth for the Garfield County submarket has been approximately 404 people and 147 households, accounting for $39.4 \%$ of population growth and $39.2 \%$ of household growth in the Three-County market. Over the last three years Eagle County and Pitkin County have accounted for $57.3 \%$ and $3.2 \%$ of the ThreeCounty total employment growth.

Table III-9 also details the populations and households of the largest towns surrounding the Town of Silt, which are detailed over the 1990 to 2015 time period. The surrounding towns include Glenwood Springs, New Castle, Basalt, and Rifle, along with the Town of Silt, the latter of which is the focus of this feasibility analysis. Since 1990 all of the areas listed have grown in population and households. The cites that have added the most people since 1990 are the Town of Rifle with 180 people, the Town of Glenwood Springs with 130 people and the Town of New Castle with 120 people added annually on average. Over the last five years, the Town of Silt has added 32 people and 11 households annually on average, down from 70 people and 24 households over the 1990 to 2015 time period.

## E. Residential Construction Trends

As shown in Table III-10, single-family permits, multi-family permits and total permits are shown since 1980 for each county that comprises the Three-County market area. Garfield County has accounted for $38.5 \%$ of the total Three-County single-family permits issued annually on average over the last 36 years, and $31.0 \%$ of the total Three-County single-family permits issued annually on average over the last three years. In total in the Three-County area, 714 single-family permits have been issued annually on average since 1980, while 125 singlefamily permits have been issued annually on average over the last three years. The recent trend in single-family permits issued has been a steady diversion from historical levels with only 20 single-family permits projected to be issued in 2015.

Garfield County has accounted for $23.0 \%$ of the total Three-County multi-family permits issued annually on average over the last 36 years, and $1.9 \%$ of the total Three-County multi-family permits issued annually on average over the last three years. In total in the Three-County area, 272 multi-family permits have been issued annually on average since 1980, while 53 multifamily permits have been issued annually on average over the last three years. The recent trend in multi-family permits issued has been a strong diversion from historical levels with zero multifamily units permitted in 2015.

As shown in Table III-11, the single-family permits and multi-family permits issued annually on average for Garfield County are individually shown and further detailed as a percentage of the total permits issued in Garfield County. Table III-11 acts as a summary table for the permit details in Table III-10, and compares the growth occurring within Garfield County submarket area to the Three-County market area. Since 1980 Garfield County area has accounted for approximately $34.2 \%$ of the total permits issued in the Three-County area, while this figure has been approximately $22.3 \%$ over the last three years. Single-family permits have accounted for $81.5 \%$ of total permits issued in Garfield County area over the last 35 years. More recently single-family permits issued in Garfield County area have accounted for $97.5 \%$ of total permits issued over the last three years. Graphs for the Three-County and the Garfield County permits issued follow Table III-11.

## F. Population and Household Growth Projections

Population, household, and employment data for the Three-County area is compared in Table III-12 over the 1980 to 2015 time period and then projected for the 2016 to 2025 time period. In 1980, the total population of the Three-County area was 46,172 and resident employment was 35,276 for an employment participation ratio of .7640 meaning that $76.40 \%$ of the ThreeCounty population was employed. By 1990, the MSA's population had increased to 64,569, and resident employment had increased to 55,424 for an employment participation ratio of .8584 . Employment and population have since continued to increase since 1990, and by 2010 the employment participation ratio had changed to .7910, dipping from a peak of .8902 in 2000. The current employment participation ratio is estimated to be .8232 , which is projected to increase steadily over the next ten years. Furthermore, Table III-12 projects population growth for the Three-County market area based on the anticipated employment growth over the next decade. With a projected 2025 resident employment of 132,023 the estimated 2025 population for the Three-County area is projected to be 160,540 based on an anticipated participation rate of .8224. Based on this estimated population growth, the Three-County area should have approximately 58,608 households in 2025 . The area's permanent population is projected to grow by 3,020 persons, 2,470 employees, and 913 households on average annually from 2016 to 2025 .

Table III-13 shows the projected growth in employment, population and households in the Garfield County submarket. By way of comparison, this Two-County submarket currently has a higher employment participation rate of . 6712 than the employment participation ratio in 1980 of .5428. Proportionally, average annual employment growth from 2000 to 2010 was less than population growth, effectively causing the employment participation ratio to decrease over the 2000 to 2010 time period. The drop may be attributed in large part to the Great Recession which occurred over the late to middle part of the 2000 to 2010 decade. Even though employment staggered during the 2000 to 2010 time span, household growth and population growth still remained strong. Employment, population and households in the Garfield County submarket are projected to grow by 1,290 jobs, 1,930 people and 665 households, respectively, on average annually from 2016 to 2025. Employment, population and household information is graphed following Table III-13 for the Three-County market and the Garfield County submarket areas. The Three-County market population and household growth table details that the projected growth rates over the next decade fall between the 1990 to 2000 and the 2000 to 2010 growth rates. The Garfield County market population and household growth table details that the projected growth rates over the next decade are projected to be slightly higher than the 1990 to 2000 and the 2000 to 2010 growth rates.

## IV. Grocer and Retail Market Analysis

## Grocer and Retail Market Analysis

## IV. Grocer and Retail Market Analysis

## A. Retail Market Characteristics

According to local retail brokers experienced with activity along the I-70 corridor and in the Town of Silt, lease rates are highest near the Wal-Mart environs in Rifle and near the Glenwood Meadows environs of Glenwood Springs at approximately $\$ 14.00$ to $\$ 17.00$ per square foot (NNN). Contrarily, retail lease rates are lowest within older product in the Town of Silt and the downtown/north Rifle environs at approximately $\$ 10.00$ to $\$ 12.00$ per square foot (NNN). Retail lease rates for newer product in the Town of Silt are comparable to parts of downtown Glenwood Springs and the City Market Shopping Center in New Castle, as shown below in Table IV-1.

| Table IV-1: Asking Lease Rates in the Town of Silt Environs, |
| ---: | ---: |
| 2015 |$\quad$| Location |  |
| ---: | ---: |
| Town of Silt |  |
| older product |  |
| newer product | $\$ 10.00-\$ 12.00$ |
| Glenwood Springs |  |

The following is a regional market synopsis of the Town of Silt environs by Joe Carpenter, a Commercial Real Estate Broker with Fleisher Real Estate in Rifle, Colorado:
"Scarcity of buildable land over the last decade from Glenwood Springs south, i.e. Carbondale, Basalt, El Jebel, and Aspen has led to housing prices that now exceed the median level of affordability for local residents. Consequently, municipalities west of Glenwood Springs including New Castle, Silt, and Rifle, have experienced the greatest transaction activity over this

## Grocer and Retail Market Analysis

aforementioned period of time. This trend is expected to continue as the circumstances creating the demand have only continued to intensify.

The New Castle market is poised to benefit from higher demand and sharply increasing prices for residential dwellings as a result of limited availability of land in Glenwood Springs. With plenty of housing stock in New Castle between Castle Valley Ranch and Lakota Canyon Ranch, master PUD's, plus an excess supply of land available, the area seems very likely to benefit from stronger than average population growth in the years ahead, which will increase retail demand well into the coming years. Currently, commercial development and the availability of services are considerably limited in New Castle; however, with the anticipated increase of more affluent consumers and residents, its commercial sector may offer the better growth opportunities.

The I-70 corridor between Glenwood Springs and Rifle, including the in-fill municipalities of New Castle and Silt, are also all likely to experience above average growth rates relative to the Roaring Fork Valley in both residential and commercial development from limited land availability to the east."

## Grocer and Retail Market Analysis

## B. Sales Tax Revenues

Table IV-2 shows the retail sales tax revenues for Garfield County and the Town of Silt over the 2005-2015 time period; 2015 is projected through August so the average annual change is calculated from 2005 to 2014. On average, retail sales tax revenues for Garfield County have grown by $\$ 10,428$ over the 2005 to 2014 time period, while this figure is approximately $\$ 22,088$ for the Town of Silt. The Town of Silt happens to have approximately $5.1 \%(2,994$ and 58,409$)$ of the population that Garfield County does; however the Town of Silt has achieved approximately $111.8 \%$ of the actual dollar growth in retail sales tax revenue that Garfield County has over the last decade, annually on average. Over the 2013 to 2014 time period, Garfield County experienced a $33.3 \%$ growth rate in retail sales tax revenues, while over the same aforementioned time period, the Town of Silt experienced a $-5.6 \%$ growth rate.

## Grocer and Retail Market Analysis

## C. Retail Square Feet Per Person

When examining other nearby mountain communities in order to determine the average square footage of retail space per person, it is apparent that the Town of Silt has the least amount of retail space per person. As shown in Table IV-3, the town of Silt has approximately 17.9 square feet of retail space per resident, based on a current 2015 population of approximately 2,994 people and 1,013 households. Metro Denver has approximately 22.0 square feet of retail space per person, Glenwood Springs has approximately 133.3 square feet of space per person, New Castle has 20.8 square feet of retail space per person, Rifle has 44.5 square feet of retail space per person, while Parachute/Battlement Mesa and De Beque have approximately 129.2 and 37.4 square feet of retail per person, respectively. The six mountain communities inventoried contain an average of approximately 71.5 square feet of retail space per resident, as compared to 22.0 per resident in Metro Denver. Glenwood Springs and Parachute/Battlement Mesa currently have the largest amount of retail space per person, indicating their characteristic as a shopping and retail oriented destination over the aforementioned locations.

Since the Town of Silt's amount of square feet of retail space per capita is so low, this is an indication that there is significant "leakage" from the town's residents in terms of shopping and retail purchases. The Town of Silt residents most likely commute to nearby locations like the Town of New Castle and The Town of Rifle for grocery and other retail purchases. Only a small amount of "outside" sales from non-residents (most likely fuel sales) are likely to occur in the Town of Silt as there is currently a very limited supply of retail options in the Towns city limits. Interestingly, the Town of Silt's 2015 median household income is $\$ 50,375$, which is just slightly less than the Denver Metro area's at $\$ 53,225$. The Town of Silt's median income is, however, less than a majority the median incomes of those towns surrounding the Town of Silt.

Table IV-3: Summary of Retail Space per Person in the Silt Environs, 2015

| Parcel | Median Income | Retail Rentable Sq. Ft. | \% of Total | Population | Households | Retail Sq. Ft. Per Capita |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Metro Denver | \$53,225 | 79,789,265 | 100.0\% | 3,624,617 | 1,398,388 | 22.0 |
| Metro Denver Total |  | 79,789,265 | 100.0\% | 3,624,617 | 1,398,388 | 22.0 |
| Glenwood Springs | \$59,364 | 1,312,574 | 65.6\% | 9,849 | 3,892 | 133.3 |
| New Castle | \$63,246 | 90,088 | 4.5\% | 4,334 | 1,499 | 20.8 |
| Silt | \$50,375 | 53,700 | 2.7\% | 2,994 | 1,013 | 17.9 |
| Rifle | \$55,112 | 424,949 | 21.2\% | 9,553 | 3,336 | 44.5 |
| Parachute | \$38,761 | 102,490 | 5.1\% | 793 | 269 | 129.2 |
| De Beque | \$55,488 | 17,900 | 0.9\% | 479 | 181 | 37.4 |
| Town of Silt Environs Total |  | 2,001,701 | 100.0\% | 28,002 | 10,190 | 71.5 |

## Grocer and Retail Market Analysis

## D. Retail and Grocer Inventory

Table IV-4 on the following page shows a current inventory of retail establishments between Glenwood Springs and De Beque along the I-70 corridor, including the Town of Silt. In total, there is approximately $2,001,701$ square feet of existing retail inventory, with the bulk of the retail development located in Glenwood Springs ( 1.31 million square feet, or $65.6 \%$ of the Total of Glenwood Springs, Silt, New Castle, Rifle, Parachute/Battlement Mesa and De Beque).

The Town of De Beque has 17,900 square feet of retail space located among nine retail locations for an average store size of approximately 2,000 square feet. The Town of Silt has 53,700 square feet of retail space located among 21 retail locations for an average store size of approximately 2,600 square feet. New Castle has 90,088 square feet of retail space located among 31 retail locations for an average store size of 2,900 square feet. Rifle has 424,949 square feet of retail space located among 79 retail locations for an average store size of 5,400 square feet. Parachute/Battlement Mesa has 102,490 square feet of retail space located among 28 retail locations for an average store size of 3,700 square feet. Glenwood Springs has $1,312,574$ square feet of retail space located among 191 retail locations for an average store size of 6,900 square feet. This data is detailed below in Table IV-4 and indicates that Glenwood Springs and Rifle have the largest average store size.

In Table IV-5, THK Associates has provided an inventory of larger-sized grocers between Carbondale and Grand Junction, within the Town of Silt regional environs. In total, 31 stores were identified, with an average size of 57,999 square feet. In the Town of Silt, Go-fer Foods is approximately only 2,800 square feet, while the nearby Walmart Supercenter and City Market in Rifle include 141,376 and 46,573 square feet. The City Market in New Castle is slightly smaller than those in the Town of Rifle at approximately 25,688 square feet. Table IV- 5 also shows the approximate driving distances and store land acreage for the inventory of nearby grocers.

## Grocer and Retail Market Analysis

## E. Growth Trends in the Silt Primary Trade Area

In the analysis to determine demand for real estate development, it is necessary to identify the primary trade area in which the subject sites typically will compete. The trade area is a function of population density, natural barriers, accessibility of the sites, and the location of competitive projects. Shown below is the Silt Primary Trade Area, including the surrounding towns. For purposes of this analysis, the Silt PTA has been designated as an area within an approximate 10-minute drive time from downtown Silt. The primary trade area encompasses all of the Town of Silt, extends east to the edge of New Castle, and west to the edge of Rifle. More specifically, the trade area reaches to Plum Court/Alkali Creek Road to the east, County Road 456 to the north, Garfield County Regional Airport to the west, and Chipperfield Lane to the south. This Silt PTA is predominantly the market environment from which a majority of the grocery anchored retail development demand in the Town of Silt is projected to draw from. Afterwards a map and the number of the retail locations within each of the nearby towns are shown, including the Town of Silt. It is clear that Rifle and Glenwood Springs contain a large number of the retail stores along the I-70 corridor surrounding the Town of Silt.

The historical growth pattern in the Silt PTA has shown the following characteristics, as seen in Table IV-6. In 1990, there were approximately 2,811 people living in 1,026 households in the Silt PTA, which represented approximately $9.4 \%$ of Garfield County's total population. Today, $11.3 \%$ of Garfield County's total population resides within the primary trade area. Since 1990, the Silt Primary Trade Area has increased by 152 people and 52 households annually on average. Over the last five years, the primary trade area has increased by 101 people and 36 households annually on average. Currently, approximately 6,610 persons in 2,334 permanent households occupy the Silt PTA.

Based on historical growth in the area, the economic forecast for the market area in conjunction with the number of residential and commercial projects planned, it is possible to project future population levels in the Silt PTA. It is projected that the primary trade area will experience an annual average permanent population growth of 150 people and 55 households over the next decade. Thus, the population in the primary trade area is projected to increase to 8,121 people and 2,983 households by 2025. Table IV-7 shows these projected growth trends for the ThreeCounty area, Garfield County and the Silt PTA.

## Grocer and Retail Market Analysis

## F. Silt Primary Trade Area Expenditure Patterns

Table IV-8 shows a breakdown of household expenditures by category of retail establishments based upon the typical budget of trade area households in 2015. The current median household income of residents in the Silt Primary Trade Area is approximately $\$ 57,647$ (this number is slightly higher than the Town of Silt's median household income shown previously in Table IV-3 of $\$ 50,375)$. The reason for this difference is because the $\$ 57,647$ value is based on the primary trade area boundaries and the figure of $\$ 50,375$ in Table IV-3 is based on the Town of Silt's city limits.

The portion of household income available for retail expenditures in Table IV-8 is determined by subtracting payments for federal taxes, savings, housing, insurance, medical expenses, recreation and transportation from total income. These payments total approximately $49.8 \%$ of total income, or $\$ 28,691$. The remaining $50.2 \%$ of income or $\$ 23,191$ per household is projected to be distributed among all the various store categories as shown below, which is based on the 2015 United States tax and expenditures statement. It is, for example, projected that the typical household in the Silt PTA will spend $28.5 \%$ or disposable income available for retail, or $\$ 6,610$ annually on groceries.

# Grocer and Retail Market Analysis

[^2]
## Grocer and Retail Market Analysis

## G. National Retail Trends

## Omni channel replaces the bricks-and-mortar versus e-commerce adage

Online-only retailers lack the high-engagement fidelity that only the in-store experience can deliver, while offline-only retailers don't deliver the comfortable and information-browsing experience that consumers utilize to make their shopping itineraries. Instead, the two channels continue to converge: Physical store operators are experiencing digital success, while online merchants like Amazon expand with showrooms and pop-up shops in order to meet shoppers face-to-face. Retailers must sell across all channels, being "channel-agnostic or channel-agile. Regardless of retail trends, the majority of overall retail sales are still taking place offline.

## Evolving processes digitally

Digital is the connective tissue between online and in-store, and is a major driver of Omni channel's seamless consumer experience push. Macys recently introduced an image-search extension that allows 300,000 followers to shop directly via Instagram. Text-Style, allows customers to make purchases using text messages, while Wall-Mart, Best Buy and supermarkets offer buy online, pick up in-store or curb-side purchases. Consumers are at all stages of adoption, researching before buying and using different channels along the way.

## Mainstreaming health and wellness

What began as a fringe movement of people interested in organic food, yoga and shopping at Whole Foods and Trader Joe's has turned into a national trend, driven by a broad constituency of consumers of all incomes, ethnicities and genders. Transparency of product, resourcing and regional impacts have translated into a cross-section of shoppers seeking healthy choices beyond traditional health categories, such as food, beauty, home, active wear and technology.

## Boomers and Millennials continue to exert influence

Most boomers will be in their 60s and 70s next year, and retailers catering to these consumers adjust to make shopping easier for them. The Baby Boomer generation will age with increased financial resources and with a greater emphasis on youth and vitality than previous generations. This can already be seen at some drugstore chains, where they're re-setting counter heights and adding carpeting in the stores. Retailers targeting Generation Y, equally as large, must be geared toward smartphone purchases, speed, impatience and excellent customer service.

## Social networks integrate shopping platforms

Over the last several years, brands have used social media to market their products, talk to customers, and even make merchandising decisions. Now, selling is being added to the list of activities people can accomplish on such social sites. The recent launches of shopping functionalities (i.e. Facebook's and Twitter's "buy" buttons and Curalate's Like2Buy platform for Instagram) tell us that social is going to get a whole lot more shop-able in 2015.

## Corporate Social Responsibility

A survey by Echo Research uncovered that $87 \%$ of global consumer's factor in CSR into their purchase decisions. In 2015, we expect more merchants to launch ethical and good deed initiatives. Retailer Mod Cloth recently signed an anti-Photoshop pledge while Warby Parker and Toms implement a "Give-a-Pair" initiative to make eye care and shoes more accessible to the less-fortunate. Shoppers want to make a difference in the community they live in.

## Grocer and Retail Market Analysis

Points-based loyalty models are no longer effective
Forward-thinking retailers will find additional ways to make each customer's experience unique and memorable. The allure of earning points for purchases is commonplace that doesn't excite consumers anymore, and the loyalty programs of the future will reward shoppers for actions and engagement, not just purchases. Walgreens, for example, allows its members to earn points whenever they engage in healthy activities like walking, weight tracking, and more.

## Improved shopping experience with technology

Merchants will adopt more technology innovations to improve the shopping experience. We can expect more iPad point-of-sale technology making cash registers obsolete, interactive window displays, beacon sensors embedded throughout a store's shelves and displays to provide instore analytics and marketing solutions, and connectivity with wearable gadgets like smart watches. Walgreens is testing Google's Project Tango 3D to create mobile store navigation, while 3D mock-ups are used by jewelers for fitting and arrangements, and "Swarm" technology gives brick-and-mortar stores the ability to analyze foot traffic.

## Companies will find better ways to manage risk and protect customers

The past couple of years have brought us far too many horror stories of data breaches in retail. The 2014 Identity Fraud Study reported an increase of more than 500,000 fraud victims, with an average cost of a breach per organization of $\$ 3.5$ million. Apple Pay assigns a unique Device Account Number to each phone. The Device Account Number, along with a transaction-specific security code is used to process each purchase, so card numbers are never transmitted or shared with merchants.

## More Retailers will take control of their value chain and improve order fulfillment

Retailers will have to take more control of how their products are manufactured, marketed, and distributed; from creation to consumption. Notable retailers that have proven this strategy include Apple, Ralph Lauren, and Trade Joe's. Despite having higher prices, these retailers managed to achieve customer loyalty and profitability with speed and convenience from new vertically integrated order fulfillment practices (same-day delivery and click-and-collect), on-thego retail (including pop-ups and food trucks), and self-service centers ( Amazon Lockers).

## Localization of product mix and store formats

Merchants that customize their stores and merchandise according the needs of their local communities will find great success. O'Reilly Auto Parts tailors its merchandise mix from store to store, carrying tools, equipment and accessories that match the specific auto market needs of the store's customer base. Starbucks, Target, and Chipotle started to deviate from usual store formats to establish smaller, "express" stores in specific locations with tailored experiences. Advanced analytics will also play an increasingly critical role in the design and development of new products, initial pricing decisions, and demand forecasting at this local level.

## Wooing shoppers with food

As online shopping has captured consumer mindshare, retailers must find new reasons to lure shoppers into brick-and-mortar stores. Retailers are recognizing that a way to a shopper's heart is through his or her stomach. Macy's Herald Square flagship in New York City is expanding its food and beverage offerings, from a full-service Italian restaurant Stella 34 Trattoria to several Starbucks, while Urban Outfitters has added restaurants to its Manhattan and Brooklyn stores.

## Grocer and Retail Market Analysis

## H. National Grocer Market Characteristics

A grocer anchored neighborhood center can include off-price malls, fashion centers, home improvement/ do-it-yourself centers, entertainment-oriented malls, auto malls, and centers anchored by a variety of stores such as warehouse/wholesale retailers, superstores, discount stores, junior department stores, or sports/health facilities. The neighborhood center market has been particularly attractive to expansion focused chains (Ross Dress for Less, Home Club, Wal-Mart) that have been unable to find suitable locations in larger malls. More importantly, customer preferences have changed indicating a desire to do comparison shopping more quickly and closer to home. Finally, based on the Urban Land Institute's (ULI) Dollars and Cents of Shopping Center studies, neighborhood centers are providing space to an increasing number of service retailers.

Table IV-9 details national grocer statistics for major retailers across the United States based on category of retail store, indicating that supermarkets are very often quite substantially larger than specialty food or convenience market stores. Table IV-10 and Table IV-11 detail average store sales per square foot and average store size in square footage for various retail categories. The most common tenants in neighborhood shopping centers such as that proposed within the Town of Silt include a supermarket, medical and dental office, unisex hair services, nail salon, and a pizza shop. Average store sizes for these selected stores are shown in Table IV-11.

## Grocer and Retail Market Analysis

## I. Retail Characteristics by Store Type

Table IV-12 shows characteristics of selected store types found in neighborhood retail shopping centers. This information is later synthesized with the Silt PTA analysis to make site-specific demand projections. The table shows the operating characteristics of the major type of retail establishments that would be suitable tenants for a neighborhood shopping center. By comparing these performance characteristics with the expenditure patterns in the primary trade area for the subject site, the total dollar volume support and square footage support that will be generated for each retail use can be estimated.

The first column of Table IV-12 shows the average sales per square foot that the median store achieves which is data that derives from the Urban Land Institute's Dollars and Cents of Shopping Centers. The second column illustrates the median store size in square footage. Multiplying the first two columns determines the minimum expenditure support required to support each of the retail store types, which is then used in conjunction with median household expenditure to determine the required number of households needed to support each retail store type.

The fifth column in Table IV-12 shows that 3,341 households are required to support a typical grocery/convenience store in the Silt PTA. The households figure is based on dividing the annual sales of $\$ 22,080,688$ for a grocery store in the PTA by the median household expenditure of approximately $\$ 6,610$. Furthermore the minimum number of households required to support a furniture store and a restaurant are drastically different at approximately 1,862 households and 162 households, respectively. The threshold household support is used later in this section with actual household growth to determine growth in demand for each store type. The individual store type demand is then compared to current inventory to determine any demand gaps along with the capture rate that the subject site is projected to achieve.

# Grocer and Retail Market Analysis

## Grocer and Retail Market Analysis

## J. Estimates for Retail Space Demand by Store Type

Secondary support for the Silt Primary Trade Area ranges between 15-20\% depending on the retail store type. The secondary support determines any additional demand that will occur from households located outside of the Silt PTA. For example, 20.0\% of grocery store demand in the PTA is projected to occur from households residing beyond the PTA boundaries.

Currently, as shown in Table IV-13 and with adjustments for secondary support for purchasers that live outside of the trade area, there is approximately $\$ 69.6$ million dollars available for annual retail expenditures within the Silt primary trade area, which will support approximately 274,000 square feet of retail space. Based on household growth and secondary support over the next ten years, retail expenditures are expected to grow to nearly $\$ 83.6$ million by 2025 , which will support approximately 323,000 square feet of retail space. Regarding grocery demand, there is currently a demand for approximately 41,000 square feet of grocery store retail space, with this demand growing to approximately 44,600 square feet by 2020 and 49,200 square feet by 2025.

Table IV-13: Estimated Retail Sales and Square Footage Support in the Silt PTA, 2016-2025

| Store Type | Estimated Annual Permanent Household Expenditures | Support From Secondary Trade Area | Annual Sales per Square Foot GLA | 2016 Support |  | 2020 Support |  | 2025 Support |  |

## Grocer and Retail Market Analysis

## K. Existing Retail Establishments

Table IV-14 lists the retail establishments that currently exist within the Silt PTA. THK identified a total of 21 stores containing approximately 53,700 square feet of retail space. Because several of the 21 stores sell products or services that span more than one retail category, the total retail inventory square footage is spread across 23 retail store types, as shown later. Of the 23 store categories, that the 21 stores cover in terms of square footage, THK identified one hardware, four grocery/gas, one automotive, one men's clothing, one women's clothing, four restaurants, two liquor, one hobby and specialty, one florist, one miscellaneous retail, four personal care products and services, one dry cleaner/laundry, and one miscellaneous personal service store. The breakdown of the 23 store categories covered is shown in Table IV-15. The Dollar General store for example is considered one store; however; it spans grocery and miscellaneous retail store categories for example. Pretty Penny Thrift for example is considered on store; however, it spans both the men's clothing and women's clothing categories. Following Table IV-15 is a series of pictures taken of the retail within the Silt Primary Trade Area.

## L. Additional Retail Square Footage Required within the Silt PTA

As shown in Table IV-16, the trade area currently supports 274,460 square feet of retail space. When considering the existing 53,700 square feet of retail space, there is a need for approximately 260,679 square feet of net retail space in the Silt Primary Trade Area after accumulating the individual space demands from the various individual retail store categories. Based upon projected household growth over the next ten years the primary trade area demand will become undersupplied as more retail space is required, and the trade area will require an additional 245,473 net new square feet of retail space by 2020 and 276,520 net new square feet of retail space by 2025 to keep pace with the growing population and retail demand.

It should be noted that the net new required square feet for each retail category is a calculation based on the supply and demand for that specific retail store category. For instance, there is an estimated 9,700 square feet of grocery store retail space currently existing in the PTA (largely due to shopping occurring at stores outside of the PTA). This supply coupled with the approximately 41,000 square feet that could be supported from demand within the TPA equates to a net required square footage of approximately 31,266 square feet. The net requirement calculation is performed for each category to show the demand for that store type. It is not to be assumed that the cumulative total of all store types is actually demanded together, because several stores cover multiple products and each individual store is analyzed on an individual basis.

## Grocer and Retail Market Analysis

## M. Retail Potentials at the Recommended Subject Site

THK Associates believes that the 8.9 -acre site on Highway 6 between $10^{\text {th }}$ and $16^{\text {th }}$ streets is very strongly positioned for grocer anchored retail/commercial development in the near future. The subject sites location between I-70 and Highway 6, as well as its proximity to the population base of the Town of Silt make is well positioned to capture shoppers in the most visibly and effective method.

THK estimates that this subject site could capture between $5-70 \%$ of the demand for construction of new retail space over the next ten years (depending on the store type) as shown below in Table IV-17. This subject site is projected to therefore support approximately 49,300 square feet of retail space today, approximately 55,000 square feet by 2020 , and approximately 62,400 square feet by 2025 . Calculations are made for each individual store type and then aggregated at the bottom of Table IV-17. For example based on a capture rate of $70 \%$ of grocery store demand occurring within the PTA, the aforementioned subject site is projected to capture 21,886 square feet out of the total 31,266 square feet demanded in the Silt PTA. At present, there is a significant pent up demand in certain store types, such as grocery stores and restaurants. The demand for these store types are occurring largely outside of the Silt PTA currently in nearby locations like the Town of Rifle and Glenwood Springs, while the demand could currently be supported with the Silt PTA.

Source: THK Associates, Inc.

Several factors will be key contributors to the success of the retail development at the Silt retail development site. Key attributes for a successful retail development include the following:

## Key Attributes for Retail Success

| Unique Location | Quality Goods |
| :--- | :--- |
| Excellent Visibility to Traffic | Synergistic Mix of Tenants |
| Adequate Parking | Service Oriented |
| Entertaining Lifestyle Environment | Attention to the Delivery of Products |
| Memorable Experience | Cluster Tenant Types |
| Sense of Community | Large Public Spaces |
| Convenient | Exceptional Landscaping with Fountains and Water Features |
| Wide Selection of Goods and Services | Symphonies, Artisans, and Craftsman Displays |
| Value in Products Offered | Sidewalk Cafes, Kiosks, and Street Merchants |

The 8.9-acre THK Associates recommended site will naturally have many of the key attributes to retail success, such as unique location, excellent visibility to traffic on I-70 and Highway 6, and convenient proximity to the Silt population base. Other key attributes will be the responsibility of the developer to provide, such as a synergistic mix of tenants and a sense of community at the development.

Shown on the following page THK Associates has listed several Colorado regional area grocers and their correlating typical square footages or footprints. For example, City Market which is owned by The Kroger Company currently operates 10 stores in the mountain areas in Pitkin, Eagle, Garfield, and Mesa Counties, whereas Sunflower Fresh Market does not currently operate any stores in these areas. This information is shown below in Table IV-18.

Table IV-19 provides a summary of the sites under consideration for retail development in the Town of Silt. Only two of the sites being considered are large enough (in acres) to adequately suit the strong retail space demand that the Town of Silt currently is facing. Of these two sites, THK feels strongly that the 8.9 -acre site (\#4) to the northeast of the intersection of I-70 and the $9^{\text {th }}$ Street exit is a prime choice due to its exposure to traffic along the highway and its proximity to the Silt population base. Maps of the six subject sites under consideration follow after Table IV-19.

In Table IV-20, THK Associates has programmed 65,700 total square feet on 8.9 acres for retail development. More specifically, THK has recommended approximately 25,000 square feet for a grocery store such as Alfalfas, Clarks Market or Safeway. This grocery store would be the anchor for an additional 33,200 square feet of retail development that would include a pharmacy, an auto parts store, two sit-down restaurants, a breakfast fast-food location, a medical or dentist office, and two to three personal care products and services stores such as a hair salon or a beauty salon. The grocery anchored strip center would be constructed on approximately 6.07 acres, allowing for a parking lot that would have roughly 5.5 parking spaces per 1,000 square feet of retail space (320 total parking spaces). THK Associates has also recommended 7,500 square feet on 1.13 acres for commercial pad development for fast-food dining and a bank.

A coverage ratio of approximately $22 \%$ was applied to the strip center development, while a coverage ratio of $15 \%$ was applied for the commercial pads.
