Increase Safety on your Dock!
Prevent loading dock accidents by proactively securing your trailer from landing gear collapse or failure

Meets OSHA Recommendations
OSHA Recommends the use of trailer stands. They may prevent the upending of trailers during loading and unloading when trailers are not attached to a tractor or converter dolly.

Durable Construction
Constructed of heavy gauge steel with all-weather wheels for maneuverability in all conditions. All units carry a full one year warranty against manufacturer defects.

Three Versatile Models
from light duty ratchet-style jacks to heavy duty automatic stands, no matter what the situation is, LDS has you covered.

TRAILER STANDS & JACKS

EZ-Riser Trailer Stand
The easiest, most convenient, and safest Trailer Stand on the market.

Prevent Hazardous Landing Gear Collapse
Any trailer that is being loaded or unloaded with just the landing gear in position is potentially an accident waiting to happen. When a trailer is unsupported, the landing gear can collapse while loading, causing serious consequences.

Federal regulations recommend that one or more trailer stands should be used to eliminate a serious, life threatening situation.

OSHA Regulation - 1910.178 (k)
Fixed jacks may be necessary to prevent upending during loading and unloading when trailer is not coupled to tractor.

Notice: All unattached trailers must be wheel chocked and nose supported by trailer stabilizers during loading and unloading.

TTMA Technical Bulletin No. 57
2.1 The purpose of this bulletin is to emphasize the potential of trailer nose diving or tail diving under certain conditions of loading and unloading and provide guidelines for reducing this danger by the use of stabilizing devices whenever the trailer is not supported by a tractor or converter dolly.

3.1.1 It is recommended that an adequate stabilizing device or devices be employed at the front of the trailer in all cases where a trailer is being loaded or unloaded with the trailer resting on its support legs rather than on a tractor fifth wheel or converter dolly.
The new EZ-Riser is a heavy duty, ergonomically designed trailer stand that offers best in class safety and simplicity. The EZ-Riser has a unique gas-activated leveling/rising system, and does not require the user to bend over or perform other straining motions. The user simply positions the EZ-Riser trailer stand under the nose of the trailer, releases the biased-based security pin, allows it to automatically rise to the underside of the trailer, and locks it using the security lever, creating a safe condition.

The Ez-Riser has an extra large base, heavy-duty 16" diameter solid rubber tires, and ergonomically positioned handelbars for easy handling on any surface. The Ez-Riser has up to a 100,000 lb static load capacity and successful free-fall strength testing. While other systems require two stands per trailer, only one EZ-Riser unit is required.

Made of heavy duty gauge steel, the square center down tube is topped with a wide 5" x 30" support pad that is automatically extended from the base height of 42" to 52.5". Only one unit is required per trailer. The Auto Riser has a static load capacity of up to 100,000 lbs. The extra large 17" x 18.5" base pad maintains trailer stability even during extremely hot weather when asphalt can sink under the weight of the trailer.

Ergonomically friendly double positioning handles with vinyl grips allow the stand to be moved and positioned with great accuracy, even in snow, sleet, and loose gravel. The unique gas activated leveling system and security locking pin safety feature allow the auto riser to be one of the easiest trailer stands to operate in the business.

The Ratchet-Riser is an easy-to-use trailer stand that economically increases dock safety. The Ratchet-Riser can be used as a trailer stand (100,000 static load capacity), as well as a trailer jack (40,000 lbs lifting capacity). To use, simply place the positioning handle into the receptacle and ratchet the trailer stand to the required height. The Ratchet-Riser has an adjustable height from 39.5" to 51", LDS recommends using two ratchet-Risers per trailer.
