

Session Business

June 18, 2017

1. The church is proceeding with a program to replace all the aging A/C units in the older building during this calendar year. Also, all florescent light bulbs in the entire building will be replaced with LED lights. Financing will be required for this project. The energy savings from the higher efficiency facilities will nearly pay for the required financing.
2. The church has received a very competitive bid from Nexus for trash pickup service at the church. This savings, in comparison to the cost associated with the former service provider, will more than offset the remaining cost of the A/C and LED lights project.
3. Dr. Green has a busy summer schedule. We will have several guest preachers during the summer months. Check the Connection for more details.
