Now, this is funny, I don't care who you are:

"In the 60s, the KGB did some fascinating psychological experiments. They learned that if you bombard human subjects with **fear messages nonstop**, in two months or less most of the subjects are **completely brainwashed** to believe the false message. **To the point that no amount of clear information they are shown, to the contrary, can change their mind.**"

Psychology says:

When you focus on problems, you will have more problems. When you focus on possibilities, you will have more opportunities.

Now they are mad because he is STOPPING two wars. How about you just admit you hate the President, love war and have been wrong for the last 20 years on every part of foreign policy?

Consider that my Christmas present.
You don't have to get me anything else.
