**To check: Here is a post from Magali Robin (on vk), in your research ...: "Are you ready for the rabbit hole that connects all the burrows? THEN WATCH THIS: As many of you have heard, Moderna is in the third and final phase of vaccine development. Here's something many of you don't know, but guess who was Moderna's first CEO? Cornell University graduate Anthony Fauci, who shared a room there with Bill Gates. Are you really paying attention right now? It was at Cornell that Bill Gates developed his RFID (radio frequency identification) and patented it under the number US2006257852. Are you awake now? Now we're really going down into the rabbit hole. Moderna is a pharmaceutical company that started in Germany under the name IG Farben. IG Farben is the inglorious name of the company that mass-produced Zyklon-B, which was used to kill millions of people during the Holocaust. After Germany's defeat, IG Farben was disbanded and its assets sold by an American turned Nazi whose name is, guess what, George Soros. So Soros renamed IG Farben to Moderna. And who was Moderna's main shareholder until his death? Jeffery Epstein. His role at Moderna earned him his fortune and his connections. Let go, guys. You have been conditioned and controlled. Please copy and distribute this document. "**
